### KEY TECHNICAL SKILLS

#### Backend & Core Languages

**Go (Golang)**, **PHP** (Laravel, Slim), **Java**, Python (Django), TypeScript

#### DevOps & Cloud Infrastructure

**AWS (ECS, EC2, Lambda)**, **Docker**, CI/CD, Linux, Bash, Jenkins, Automated Deployments

#### Frontend & UI

**React**, **Angular**, Vue.js, JavaScript, HTML5, CSS3

#### Databases & Tools

MySQL, PostgreSQL, **Redis**, REST/SOAP APIs, Git, Version Control, Microservices Architecture

#### E-commerce & Specialized Systems

**Magento**, Fintech/Payment Integrations, WordPress, ERP/CRM Feeds

### LANGUAGES

Spanish	Native
English	Advanced

### PROFESSIONAL SUMMARY

Staff Software Engineer | Systems & DevOps Architect with 15+ years of experience in high-scale web platforms. Expert in leading legacy system modernization from PHP/Java monoliths to highly available, cost-optimized microservices in Go (Golang), orchestrated via AWS ECS/Lambda. Proven track record in CI/CD automation (95% reduction in deployment time), performance optimization, and fostering technical excellence in global, multidisciplinary teams.

### PROFESSIONAL EXPERIENCE

#### Staff/Senior Software Engineer

*Sisu media Inc.*

May 2019 - Present

- Spearheaded the full-stack migration of the high-volume MyWU V2 platform from an unmaintained **PHP monolith** to a modern microservices architecture in **Golang (Gin framework)**. This re-platforming improved **core query processing speed by 10%** and alleviated **RDS database overload** by optimizing complex queries and leveraging native concurrency.
- Engineered and Automated a comprehensive CI/CD pipeline using **AWS ECS** and **Docker** for the core platform, reducing manual deployment time from several hours to only a few minutes (an estimated 95% reduction), and significantly increasing release frequency.
- Significantly enhanced frontend user experience and operational efficiency by migrating the **Angular UI** to be served via **AWS S3/CloudFront (CDN)**. This move reduced initial load latency by 25% and simultaneously contributed to the reduction of API and database query traffic through optimized caching strategies.
- Integrated a critical legacy **Tomcat** web application running on **EC2** into the unified **Docker/ECS** orchestration flow, eliminating manual maintenance and deployment overhead and ensuring its seamless scalability alongside modern microservices.
- Standardized and containerized all development environments using **Docker compositions** pre-configured with **Xdebug**, which reduced the onboarding and project setup time for new developers by approximately 90% (from hours to minutes), establishing critical environmental parity.

## PROFESSIONAL EXPERIENCE

---

### Senior Software Developer

*ArroyoLabs Inc.*

Jan 2015 - May 2019

- **Actively contributed to the architecture of Erdiko** (internal PHP micro-framework) by proposing features, creating design diagrams, and participating in collaborative working sessions to define high-quality, standardized components. This effort **reduced the average integration time for new micro-services by an estimated 15%** across core projects.
- **Contributed to the integration** of a new payment and promotions bank into the **Laravel/SOAP REST API** for the **CTM (Corporate Travel Management)** platform (worked on-site in LA), enabling a **completely new revenue stream** for the business and expanding the platform's user functionality to thousands.
- **Enhanced management efficiency** by implementing new feature support and updating the internal dashboard built on **Slim PHP**, providing Managers and Business Analysts with a **consolidated view** for accelerated decision-making.
- **Improved marketing agility** by designing and building a **custom WordPress plugin** that allows the Marketing team **inline post edition**, delivering a direct-update tool and eliminating the need for complex administrative access or training.
- **Stabilized and Automated** the processing of **Order & Fulfillment Feeds** for the **Magento (OneStop)** e-commerce platform using Bash scripts and PHP, **reducing processing time by 95%** and significantly increasing order data accuracy.
- **Contributed to the launch of the MVP** (Minimum Viable Product) of the Survios VR-Game Showroom, delivering **Vue.js** components and critical data logic in the **Django** backend, laying the foundation for slot inventory management.
- **Resolved critical stability failures** in the catalog data processes (e.g., 'memory exhausted' in large pricing updates), **improving system reliability** for Brighton merchants and enhancing management efficiency through dashboard refactoring in **Slim PHP**.

---

### Software Developer - Freelance / Technical Consultant

*Freelance*

Jan 2014 - Present

Maintained continuous technical consultancy and application development for diverse clients alongside full-time roles.

---

### Software Developer

*Up and Running Software Inc.*

Jan 2013 - Oct 2014

- **Executed and delivered** customized web solutions for a diverse client portfolio, leveraging multiple **PHP frameworks (CodeIgniter)** and specializing in the **rapid deployment and maintenance** of client **WordPress themes**.
- Contributed to the development of **Passare**, a complex funeral planning web application built on **Ruby on Rails**, where responsibilities spanned UI modifications, database query implementation, and quality assurance testing across a year-long engagement.

## PROFESSIONAL EXPERIENCE

---

### Software Developer

*Summa Solutions Inc.*

Oct 2011 - Dec 2012

- **Led full-stack development** of the **Freight Connections MVP (PHP/CodeIgniter)**, a logistics auction platform that enabled users to post loads and participate in dynamic bidding, delivering a functioning system that impacted **~5,000 users** and optimized transport logistics in the USA.
- Developed a critical, high-visibility feature for the **CinSay (Magento)** political donation platform, allowing political parties to upload campaign videos with donation overlays while implementing validation logic to prevent fraudulent activity.
- Designed and developed the **Univision Android MVP in Java (MVP pattern)**, enabling users to view, filter, and receive alerts for events, successfully deploying a mobile app that impacted **~5,000 users**.

---

### Web Developer

*Código Austral*

Jan 2011 - Oct 2011

- **Engineered the web interface** for **Cloud Experience (CX)**, a high-traffic cloud storage platform (competitor to early Dropbox), utilizing **PHP (CakePHP)**, **JavaScript (jQuery)**, and **MySQL**.
- **Developed core platform features** including **OAuth/Google ID integration**, large file handling, social media sharing, and user profile management, impacting approximately **100,000 platform users**.
- **Enhanced server performance** by optimizing the **Linux/Amazon EC2** configuration for the web layer, resulting in an approximate **25% improvement in platform responsiveness** and user experience.

---

### Development Lead / Tech Lead

*SINTYS*

Mar 2005 – Dec 2010

- **Spearheaded the design and development** of **SOAP Web Services** to integrate SYNTIS systems with various National, Provincial, and Municipal organizations. This crucial integration **reduced the information cross-referencing latency by 98%**, resulting in an estimated **20 days of saved work per consultation** nationwide.
- **Led the design and development** of a national Civil Registry Digitalization System (precursor to modern National ID/DNI). The project digitalized **15-20 million records** and **reduced acta search time by 99%** (from weeks to minutes), creating high-impact social benefit for millions of citizens.
- **Architected and developed a web service-based integration system** to interconnect **8 Property Registries**, enabling the secure sharing of Judicial Inhibition data. This standardization and integration effort **reduced the time to access critical inhibition information by 95%** (from months to minutes) for legal and judicial professionals.
- **Managed and coordinated** the development team, including responsibilities for candidate interviewing and selection, cross-sectoral IT representation, and project planning.
- **Participated in the development** of the internal Intranet (using **PHP, JavaScript, MySQL**) used by **250+ people** across the company's national offices to process data from over **70 regulatory organisms**.

## EDUCATION & CERTIFICATIONS

---

### Engineering in Information Systems (Incomplete)

Universidad Tecnológica Nacional (UTN)

1997 - incomplete

**Solid Technical Foundation:** Completed 27 of 40 subjects, including final-year programming and systems architecture courses.

---

## CERTIFICATIONS

---

### Getting Started with Go

Coursera

2020

<https://www.coursera.org/account/accomplishments/certificate/K7EW6YYPFLRY>

Completed the Getting Started with Go course on Coursera.

---

### Functions, Methods, and Interfaces in Go

Coursera

2020

<https://www.coursera.org/account/accomplishments/certificate/B7P963DUEF8Z>

Completed the Functions, Methods, and Interfaces in Go course on Coursera.

---

### Programming with Google Go Specialization

Coursera

2020

<https://www.coursera.org/account/accomplishments/specialization/certificate/JQ9S5PMWV9Z9>

Completed the Programming with Google Go Specialization on Coursera.

---

### Concurrency in Go

Coursera

2020

<https://www.coursera.org/account/accomplishments/certificate/8ISBBAJTAKEX>

Completed the Concurrency in Go course on Coursera.

---

## OPEN SOURCE & PERSONAL PROJECTS

---

### Go Utilities (Internal Tools & Libraries)

- **Goembedx (Vector DB):** Engineered and developed a vector database from scratch in **pure Go** (v0.3.0), demonstrating expert-level Go knowledge and a deep understanding of modern data structures and AI/ML concepts (embeddings). (<https://github.com/ldaidone/goembedx>)
  - **Gomemo (Memoization Library):** Designed and implemented an elegant, thread-safe, and generic memoization library in **pure Go**, which provides context-aware and pluggable caching solutions for high-performance applications. (<https://github.com/ldaidone/gomemo>)
- 

### PHP/Laravel Architecture

- **Laravel-ddd-starter:** Created a **comprehensive project template** for Laravel that enforces **Domain-Driven Design (DDD)** architecture, providing a standardized, clean starting point for new applications that significantly reduces setup time and enhances code maintainability. (<https://github.com/ldaidone/laravel-ddd-starter>)
  - **Laravel-ddd-commands:** Developed and maintained a set of custom **Artisan commands** that automate the boilerplate creation of various components within a **DDD** structure, drastically reducing development time when adhering to complex architectural patterns. (<https://github.com/ldaidone/laravel-ddd-commands>)
- 

### External Contributions

- Resolved a critical compatibility issue in the popular **WordPress HTTPS plugin** by implementing fixes for deprecation messages and adjusting core functionality to ensure full compatibility with **WordPress version 4.4**. **Successfully submitted a Pull Request (PR) that was approved and merged** (2016), ensuring stability and continued functionality for thousands of users.
-
